The online publishing of the Jamboree Information Guide is under the authority of the 23rd Aotearoa New Zealand Scout Jamboree – Jamboree Leadership Team (JLT).

**Version Control** - To ensure the latest information in this Guide, please refer to the version and date authority in each page footer.

## Introduction

The following facilities and services will be located throughout the Jamboree site:

- Fresh water points
- Disposal points for waste fluids (grey water)
- Toilets and showers.

The Camp Support Team office will all be located in the Jamboree Hub in the main building.

## Utilities and Services

All underground utilities and services will be clearly marked. If in doubt, please ask a member of the Site Team for more information.

All pegs, poles, fences, structures, etc., must be clear of all such services, including any overhead cables (phone and power).

No trenches or holes are to be dug without prior approval from the Site Services Team. You can contact your Troop Support person to arrange a visit from the Site Services Manager to discuss the need to dig a hole or trench.

All electrical power supply boxes and underground cables will be treated as live. No electrical mains power is available for Troop sites.

If medical equipment on Troop sites requires power, Troops are encouraged to source battery-powered equipment. Charging facilities will be available at the Jamboree Hub. No connection may be made to any utilities or services (including water taps) without the Infrastructure Manager's first authorisation.

Any electrical cables, data cables, phone lines etc., strung over roads or accessways shall be securely fixed a minimum of 4 metres above the ground and identified by highly visible streamers or flags.

## Water hoses

Water hoses, if used, must be either food-grade or brand-new. They must be installed so there is no trip hazard and, as practically as possible, remain on your Troop site, not obstructing the service way between sites or roadways. Do not unplug someone else's hose to use yours. Make sure you have sufficient adaptors to connect your hose.

## Open Fires and Gas Lighting are Prohibited

No open-fire cooking, heating, campfires, or gas lighting are permitted. Open fires and gas lighting are prohibited because of the high fire risk within the Jamboree site.

## Toilets and Shower Blocks

Commercial cleaners will clean the shower blocks and toilets regularly (up to twice daily). However, between these cleans, **EVERYONE** has to take responsibility for their actions and ensure these areas are kept clean and damage free.

**Vandalism of any description will not be tolerated.**

Any issues should be reported to the Camp Support Team or through Vault. Ideally, everyone should deal with incidents when they occur, with minimal delay.

## Solid Waste Disposal

Each Troop site will need to bag up its daily rubbish. Further details on the logistics of how, when and where the rubbish will be collected are to be advised.

Troops are encouraged to recycle cardboard, tin cans, aluminium cans and plastic. Cans and bottles must be thoroughly washed before transport to the recycling disposal centre. Final details on recycling are to be confirmed.

## Transportation and Disposal of Waste Water

All liquid waste (including hand washing, cooking, cleaning and laundry) must be strained or filtered before transportation to the wastewater disposal point in sealed containers. It is recommended muslin/cheesecloth or Chux cloths be used as filtering cloths. These must be replaced regularly and disposed of with solid waste.

All containers used for the transportation of wastewater must have a sealable lid. Each troop must bring a trolley to transport these containers to the disposal points.

The containers should be of a size where Scouts can lift them. Only fill them to a level where the smallest Scout can cope with emptying them.
